About Data-Lead Africa

“We turn data into insight, and insight into decisions.”

RESEARCH · ANALYTICS · TRAINING

Data-Lead Africa is a research and training consulting firm providing monitoring & evaluation, data analytics, data science training and strategic consulting services. We combine statistics, research methods and technology to process data into insight.

Our core expertise spans research and data collection, data analysis and data science training, monitoring & evaluation, and business, human-resource and market-research analytics, delivered by a team of seasoned industry experts.

PARTNERS & CLIENTS WE HAVE WORKED WITH

Built to launch your data career

The Data Analytics Bootcamp equips aspiring data professionals with practical, job-ready skills. Through real-world projects you'll learn to transform raw data into insight that supports better decisions, preparing you to contribute confidently to any data-driven organisation. It follows a clear career path:

01

Awareness

Understand the data-analytics landscape and the roles it opens.

02

Exploration

Discover the tools and techniques that fit your goals.

03

Training

Build job-ready skills through hands-on, mentored practice.

04

Opportunity

Graduate with a portfolio and step into your next role.

What you'll be able to do

- Collect and clean real-world datasets end to end
- Build interactive dashboards and reports that inform decisions
- Graduate with a portfolio-ready capstone project
- Run descriptive, inferential and predictive analysis
- Present findings with confidence to stakeholders

— HOW IT WORKS

A programme that builds real experience

Five ways we take you from learning to doing.

Hands-on training

Practical, project-based work on the industry-standard tools you'll use on the job.

Mentorship

Guidance from seasoned analysts and domain experts throughout the programme.

In-agency internship

Work alongside the Data-Lead Africa team on live projects and gain real experience.

Guided self-study

Structured personal research and skill-building between sessions.

Capstone project

An end-to-end research project you present to complete the bootcamp.

SCHEDULE

Monday–Friday

DELIVERY

**In-person &
Online**

LOCATION

Abuja, Nigeria

— THE TOOLKIT

Tools you'll master

You'll graduate fluent in the software analysts actually use on the job.

Excel

SPSS

Stata

Python

R

MySQL

Power BI

NVivo

QDA Miner

ArcGIS

Kobo Toolbox

— CURRICULUM

Four core areas, one capstone

Data Collection

Design digital forms and gather clean, reliable data from the field.

Data Management

Store, structure and query data with SQL and spreadsheets.

Data Analysis

Quantitative, qualitative, programming and geospatial analysis.

Data Visualisation

Turn results into dashboards and reports that drive decisions.

Modules 01–04

01

Data Collection **Kobo Toolbox & XLSForm**

Design digital forms and run mobile, paperless data collection for field research and M&E, then sync submissions to a server ready for analysis.

- Data types, sources and collection techniques; data validation
- Advanced XLSForm logic: skip logic, constraints, repeat groups, multimedia
- Managing submissions, resolving discrepancies, visualising geographic data
- Building and deploying forms with the Kobo form builder
- Field collection with KoboCollect and the aggregate server

02

Data Management **SQL (MySQL)**

Store, query and manage relational data with MySQL, the foundation for working with real-world datasets at scale.

- Relational database concepts, SQL syntax and MySQL setup
- Joins, subqueries, derived tables and multi-table queries
- Indexing, query optimisation, backups, users and security
- SELECT, WHERE, ORDER BY and aggregate functions (COUNT, SUM, AVG)
- Inserting, updating and deleting records; transactions and error handling

03

Quantitative Analysis **Excel · SPSS · Stata**

Run the full quantitative workflow, from descriptive to predictive statistics, across three industry-standard packages.

- Foundations: descriptive stats, hypothesis testing, parametric vs non-parametric
- SPSS: data definition, descriptive and inferential analytics, visualisation
- Inferential tests: t-tests, ANOVA/MANOVA, ANCOVA, chi-square, post-hoc
- Excel: Data Analysis ToolPak, descriptive, inferential and predictive analysis
- Stata: data management, exploratory analysis and regression
- Predictive modelling: simple, multiple and binary logistic regression

04

Programming for Analysis **Python & R**

Use code to clean, analyse and visualise data at scale, and build reproducible analysis workflows.

- Python (JupyterLab): pandas for cleaning and restructuring data
- R ecosystem: data structures, exploration, packages and modelling
- Linear & logistic regression and model prediction in both languages
- SciPy & Statsmodels for inference; scikit-learn for regression
- Hypothesis testing, mean-comparison, ANOVA and association tests
- Visualisation with Matplotlib, Seaborn and ggplot

Modules 05–08

05

Qualitative Analysis **NVivo & QDA Miner**

Turn interviews, documents and open-ended responses into structured, evidence-based insight.

- Qualitative research design; importing text, PDF, audio, video and images
- Thematic analysis, word clouds, coding stripes and highlights
- Reporting and exporting codebooks and reports (Word & Excel)
- Coding: codes, schemes and dictionaries; manual vs automated coding
- Analysing and visualising coded data

06

Geospatial Analysis **ArcGIS**

Map and analyse the spatial dimension of your data to reveal patterns that location-blind analysis misses.

- GIS concepts; vector vs raster; shapefiles and geodatabases
- Geoprocessing: buffers, clipping, overlay and interpolation
- Cartography: symbology, thematic maps, labels and map production
- Creating and editing spatial data: points, lines, polygons, attributes
- Coordinate reference systems and topology

07

Data Visualisation **Excel & Power BI**

Communicate findings with clear, interactive dashboards that drive decisions.

- Visualisation best practice: choosing the right chart, prepping data
- Power BI: Power Query to clean, shape and model data
- Publishing, sharing and scheduled refresh via Power BI Service
- Excel: chart types, dashboards, sparklines and trendlines
- Relationships and DAX measures; slicers, filters and drill-through

08

Monitoring & Evaluation **Applied track**

Apply your analytics skills in development and programme settings using established M&E frameworks.

- Results-based management; M&E systems, methods and tools
- Measuring impact with quantitative and qualitative methods
- Communicating results and recommendations to stakeholders
- Building an M&E plan and designing project evaluations
- Risk management; monitoring, reporting and control

Capstone Project

Bring it all together in an end-to-end research project on a topic of your choice, from data collection to insight, presented to complete the programme.

Ready to join?

Laptop specifications

Operating system	Windows (preferred)
Memory (RAM)	4 GB minimum · 8 GB recommended
Storage	250 GB minimum
Processor	2.0 GHz dual-core or better

Who should apply

Aspiring data analysts, recent graduates, career-changers, researchers, and monitoring & evaluation or programme staff who want practical, job-ready skills.

How to enrol

- 1 Apply**
Register your interest and complete a short application.
- 2 Reserve your seat**
Pay the programme fee to confirm your place in the cohort.
- 3 Onboard & begin**
Get your welcome pack, join the cohort and start learning.

PROGRAMME FEE

NGN 250,000

Covers the full 3-month programme: training, mentorship, in-agency internship and capstone.

“Upgrade your data skills and accelerate your career.”
